

New Zealand Defence Force engages Cogito for security enablement

Cogito Group, an Australian SME that specialises in digital security and systems integration today announced they have been engaged to assist New Zealand Defence Force (NZDF) in planning the implementation of stronger authentication and access enabled solutions.

Richard Brown, CEO, Cogito Group said, "Cogito Group have built a solid reputation as cyber security specialists. We successfully assisted the Australian Department of Defence realise some of their Identity management goals and are currently contracted to provide support, maintenance and enhancements to their IdM. These services were required in order to secure high level access to trophy systems containing highly classified information."

NZDF is seeking to further bolster the protection afforded to their ICT assets. The successful implementation of stronger digital credentials will allow for cryptographically sound technology to be integrated while significantly improving the end-user experience and substantially improving the security posture of the enterprise.

We look forward to assisting NZDF in achieving non-repudiation; authentication; integrity and confidentiality requirements now and into the future.
